REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

In regard to claim 1, the prior art of record does not teach a plurality of memory devices positioned around the memory hub and arranged in pairs on the same side of the circuit board as one another, each memory device having the same physical pin layout and including pins associated with a first functional group of signals adjacent a first end of each memory device and pins associated with a second functional group of signals adjacent a second end of each memory device, and the first end of each memory device in each pair being positioned adjacent one another on the circuit board and the second end of each device in a pair being positioned adjacent a second end of a device in one of the other pairs;

a plurality of command-address busses, each command-address bus coupled to a port on the memory hub and at least one of the pins associated with the second functional group of signals on each of the at least two memory devices, the two memory devices being from a different pair

In regard to claims 10 & 21, the prior art of record does not teach a plurality of memory devices positioned around the memory hub and arranged in pairs on the same side of the circuit board as one another, each memory device having the same physical pin layout and where the pin layout includes pins associated with a first functional group of signals adjacent

a first end of each memory device and pins associated with a second functional group of signals adjacent a second end of each memory device, and the first end of each memory device in each pair being positioned abutting one another on the circuit board;

a plurality of command-address busses, each command-address bus coupled to a port on the memory hub and at least one of the pins associated with the second functional group of signals on each of the at least two memory devices, the two memory devices being from a different pair

In regard to claim 26, the prior art does not teach positioning pairs of memory devices around the memory hub such that both devices in each pair are on the same side of the circuit board and each pair is perpendicular to adjacent pairs, each memory device in a respective pair being physically rotated 180 degrees in the plane of the circuit board relative to the other device in the pair; coupling control-address signals between a port on the memory hub and two memory devices via a common path, the two memory devices being from different pair.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
